

Comments from candidates on The Diploma in Urgent Medical Care of The Royal College of Surgeons of Edinburgh.

- “I wanted to know what the standard of a Level 7 practitioner was and in leading an urgent care service where there is much greater emphasis on professionals from different backgrounds I wanted to know the expected standard.”
- “I came away with the belief that the Diploma was set at a high but appropriate standard. It also gave me credibility in sitting an exam when there were other senior doctors who were anxious for fear of failure.”
- “The diploma is relevant to anyone working in unscheduled primary care settling be that in or OOH.”
- “I valued the time I spent reviewing the up to date management of acute presentations but for me specifically this was for paediatrics and injuries.”
- “The diploma promotes leadership which is excellent. I believe that there will be some clinicians who sit this exam who are inspired to implement change and take on senior clinical and managerial roles as a result of sitting this exam. This is something that is desperately needed in urgent care.”
