

# Extrication

13 July 2022, 19:00 BST

## Overview

This webinar consists of an overview of the historical and current evidence on which extrication principles are based, new guidance is presented and a multidisciplinary panel will discuss the challenges of implementation and answer any questions.

## Aims

This webinar will provide the attendee with an up-to-date appreciation of extrication and an insight into the latest multidisciplinary evidence based guidance.

## Learning Objectives

By the end of this webinar, the participant should be able to understand:

- Extrication in its historical context
- The frequency of spinal and time critical injuries in the trapped casualty
- The biomechanics of current extrication practice
- Patient's perspectives of extrication
- The application of evidence based medicine principles to this area of practice
